The members of Provincial Defense Council - headed by Ernesto Santiesteban Velázquez, its president - went to Gibara this Sunday to make the news official; the Municipality leaders and the people were also congratulated by Santiesteban.

The authorities also called to not neglect on the measures to face the disease, in a territory that is an example in its action in a situation never before known.

The situation in the province is favourable, as the last confirmed case was on May fifth, but we know the consequences of the disease, and how quickly it will return if all measures are not taken.

The province thus has 92 confirmed cases for an incidence rate of 9% per 100 000 inhabitants.
